

10 Ways to Encourage Independent Learning

Presented by Abby Banks

1. Start With the End in Mind

Have a long-term vision of raising a student who can manage assignments, meet deadlines, and solve problems independently.

2. Choose Student-Friendly Curriculum

Select materials written directly to the student or designed for independent use.

3. Teach the “How,” Not Just the “What”

Show your child how each subject works—where to find instructions, how to check answers, and how to complete assignments properly.

4. Establish a Clear Daily Routine

Make sure your child can answer: “What should I be doing right now?” without asking you.

5. Use Visual Tools

Implement workboxes, checklists, planners, or assignment charts to promote ownership.

6. Assign One Independent Subject Early

Start small. Give them one subject they are fully responsible for completing on their own.

7. Gradually Reduce Your Involvement

Step back slowly—don’t remove support overnight. Increase responsibility as they show readiness.

8. Teach Self-Checking Skills

Encourage students to check their own answers and correct mistakes before bringing work to you.

9. Let Them Track Their Progress

Have middle and high schoolers record grades or completed assignments themselves.

10. Shift Into the Role of Coach

Offer guidance, troubleshoot struggles, and celebrate progress—but resist doing the work for them.
